

Vote “NO” on I-2066 to put our communities first, protect energy efficiency, and prevent higher energy bills.

I-2066 will be on the ballot this November. This initiative would attack energy efficiency by repealing common sense protections—leaving all of us with higher energy costs and making our communities more vulnerable during storms, wildfires, and deadly heat waves. It’s backed by powerful interest groups who want to stop the transition to clean energy and make as much money as possible while families and businesses pay higher bills.

How would I-2066 affect us?

- **I-2066 would make energy bills more expensive and raise costs for families** and individuals living on low-incomes. It would force utility companies to keep investing in outdated technology and pass the costs on to customers.
- **I-2066 would jeopardize energy efficiency programs** and take away important customer rebates—broadly reducing access to efficient, money-saving appliances.
- **I-2066 would roll back existing laws** that keep our utilities on the path to clean energy.
- **I-2066 would have far-reaching impacts that would undermine our Clean Air Act, threatening health protections** against harmful air pollution. It would limit towns, cities, and counties from making decisions that work best for their communities.

How can we beat I-2066?
